

what we do	what that means	why it matters
semi-automated molding process	fast lay-up, cycle and cure times as well as less manual labor throughout production	we can make more items in a faster timeframe, approx. 4x faster than fiberglass, at a lower cost
e-flex [®] material	highly durable material	less breakage in stores, longer lasting mannequins, all resulting in overall lower costs
e-flex/ci [®] material	e-flex [®] , with color infused throughout the material	no need for paint, therefore no paint to chip. also less labor involved, again resulting in lower costs
magnadapt magnetic fittings	arms and bodies are attached with magnetic fittings instead of traditional bayonettes	easier and faster for store employees to dress and undress
rotational mold process	material is evenly distributed throughout tool during molding, and pulled into fine details	potential for fine, realistic body details
full-time master sculptor	on-staff sculptor with over a decade of mannequin-sculpting experience	custom work will have the same high quality details as a collection item
design expertise	in-house staff of experienced designers who are aware of trends in the fashion and retail industries	mannequins will reflect what is hot in the market as well as timeless design elements
custom capabilities	sculpted to fit your needs, tailored to fit your specifications, proprietary rights available	mannequins that are unique to your look and always fit your clothing
